

**Index Theory**  
**with Applications to Mathematics and Physics**

David Bleecker  
Bernhelm Booß-Bavnbek

# Contents

Preface	vii
<b>Part 1. Operators with Index and Homotopy Theory</b>	<b>1</b>
Chapter 1. Fredholm Operators	2
1. Hierarchy of Mathematical Objects	2
2. The Concept of Fredholm Operator	3
3. Algebraic Properties. Operators of Finite Rank	5
4. The Snake Lemma	6
5. Operators of Finite Rank and the Fredholm Integral Equation	9
Chapter 2. Analytic Methods. Compact Operators	11
1. Analytic Methods	11
2. The Adjoint Operator	13
3. Compact Operators	16
4. The Classical Integral Operators	23
5. The Fredholm Alternative and the Riesz Lemma	26
6. The Sturm-Liouville Boundary Value Problem	27
7. Unbounded Fredholm Operators	32
8. Trace Class and Hilbert-Schmidt Operators	46
Chapter 3. The Main Theorems	57
1. The Calkin Algebra	57
2. Perturbation Theory	59
3. Homotopy Invariance of the Index	62
4. Homotopies of Operator-Valued Functions	67
5. The Theorem of Kuiper	72
6. The Topology of $\mathcal{F}$	76
7. The Construction of Index Bundles	77
8. The Theorem of Atiyah-Jänich	83
9. Determinant Line Bundles	86
10. Essential Unitary Equivalence and Spectral Invariants	100
Chapter 4. Wiener-Hopf Operators	112
1. The Reservoir of Examples of Fredholm Operators	112
2. Origin and Fundamental Significance of Wiener-Hopf Operators	113
3. The “Characteristic Curve” of a Wiener-Hopf Operator	114
4. Wiener-Hopf Operators and Harmonic Analysis	115
5. The Discrete Index Formula	117
6. The Case of Systems	119

7. The Continuous Analog	121
<b>Part 2. Analysis on Manifolds</b>	<b>125</b>
Chapter 5. Partial Differential Equations	127
1. Linear Partial Differential Equations	127
2. Elliptic Differential Equations	130
3. Where Do Elliptic Differential Operators Arise?	131
4. Boundary-Value Conditions	133
5. Main Problems of Analysis and the Index Problem	135
6. Numerical Aspects	135
7. Elementary Examples	136
Chapter 6. Differential Operators over Manifolds	145
1. Motivation	145
2. Differentiable Manifolds - Foundations	145
3. Geometry of $C^\infty$ Mappings	148
4. Integration on Manifolds	152
5. Differential Operators on Manifolds	154
6. Manifolds with Boundary	157
Chapter 7. Pseudo-Differential Operators	160
1. Motivation	160
2. "Canonical" Pseudo-Differential Operators	163
3. Pseudo-differential Operators on Manifolds	166
4. Approximation Theory for Pseudo-Differential Operators	178
Chapter 8. Sobolev Spaces (Crash Course)	182
1. Motivation	182
2. Definition	182
3. The Main Theorems on Sobolev Spaces	186
4. Case Studies	187
Chapter 9. Elliptic Operators over Closed Manifolds	190
1. Continuity of Pseudo-Differential Operators	190
2. Elliptic Operators	192
Chapter 10. Elliptic Boundary-Value Systems I (Differential Operators)	196
1. Differential Equations with Constant Coefficients	196
2. Systems of Differential Equations with Constant Coefficients	200
3. Variable Coefficients	202
Chapter 11. Elliptic Operators of First Order with Boundary Conditions	204
1. The Topology of Boundary Value Conditions (Case Study)	204
2. Generalizations (Heuristic)	208
Chapter 12. Elliptic Boundary-Value Systems II (Survey)	212
1. The Poisson Principle	212
2. The Green Algebra	213
3. The Elliptic Case	215

<b>Part 3. The Atiyah-Singer Index Formula</b>	219
Chapter 13. Introduction to Algebraic Topology (K-Theory)	221
1. Winding Numbers	221
2. The Topology of the General Linear Group	226
3. The Ring of Vector Bundles	230
4. K-Theory with Compact Support	234
5. Proof of the Periodicity Theorem of R. Bott	236
Chapter 14. The Index Formula in the Euclidean Case	242
1. Index Formula and Bott Periodicity	242
2. The Difference Bundle of an Elliptic Operator	243
3. The Index Formula	247
Chapter 15. The Index Theorem for Closed Manifolds	251
1. The Index Formula	251
2. Comparison of the Proofs: The Cobordism Proof	253
3. Comparison of the Proofs: The Imbedding Proof	255
4. Comparison of the Proofs: The Heat Equation Proof	255
Chapter 16. Applications (Survey)	261
1. Cohomological Formulation of the Index Formula	262
2. The Case of Systems (Trivial Bundles)	263
3. Examples of Vanishing Index	264
4. Euler Number and Signature	265
5. Vector Fields on Manifolds	269
6. Abelian Integrals and Riemann Surfaces	272
7. The Theorem of Riemann-Roch-Hirzebruch	276
8. The Index of Elliptic Boundary-Value Problems	279
9. Real Operators	284
10. The Lefschetz Fixed-Point Formula	285
11. Analysis on Symmetric Spaces	286
12. Further Applications	287
<b>Part 4. Index Theory in Physics and the Local Index Theorem</b>	289
Chapter 17. Physical Motivation and Overview	290
1. Classical Field Theory	291
2. Quantum Theory	298
Chapter 18. Geometric Preliminaries	320
1. Principal G-Bundles	320
2. Connections and Curvature	321
3. Equivariant Forms and Associated Bundles	325
4. Gauge Transformations	335
5. Curvature in Riemannian Geometry	341
6. Bochner-Weitzenböck Formulas	360
7. Characteristic Classes and Curvature Forms	369
8. Holonomy	381
Chapter 19. Gauge Theoretic Instantons	386

1. The Yang-Mills Functional	386
2. Instantons on Euclidean 4-Space	391
3. Linearization of the Manifold of Moduli of Self-dual Connections	415
4. Manifold Structure for Moduli of Self-dual connections	422
Chapter 20. The Local Index Theorem for Twisted Dirac Operators	438
1. Clifford Algebras and Spinors	438
2. Spin Structures and Twisted Dirac Operators	449
3. The Spinorial Heat Kernel	462
4. The Asymptotic Formula for the Heat Kernel	472
5. The Local Index Formula	498
6. The Index Theorem for Standard Geometric Operators	516
Chapter 21. Seiberg-Witten Theory	564
1. Background and Survey	564
2. $\text{Spin}^c$ Structures and the Seiberg-Witten Equations	574
3. The Manifold of Moduli	582
4. Compactness of Moduli Spaces and the Definition of S-W Invariants	601
Appendix A. Fourier Series and Integrals (fundamental principles)	621
1. Fourier Series	621
2. The Fourier Integral	623
3. Higher Dimensional Fourier Integrals	626
Appendix B. Vector Bundles	628
Appendix. Bibliography	641
