Bernhelm Booß-Bavnbek is Associate Professor of Mathematics and Mathematical Modelling at the Mathematics and Physics Department of Roskilde University (Denmark). His main interest is the global analysis of partial differential equations, in particular gluing formulas for spectral invariants. He is the author of *Topology and Analysis – The Atiyah-Singer Index Formula and Gauge-Theoretical Physics* (Springer 1985, with D. Bleecker) and *Elliptic Boundary Problems for Dirac Operators* (Birkhäuser, 1993, with K. P. Wojciechowski). Email: <booss@ruc.dk>.

Jens Høyrup is Docent (~ British “Reader”) at Roskilde University, Section for Philosophy and Science Studies (Denmark). His main research field is the conceptual and cultural history of pre- and early modern mathematics. He has recently published *Human Sciences: Reappraising the Humanities through History and Philosophy* (SUNY Press, 2000) and *Lengths, Widths, Surfaces: a Portrait of Old Babylonian Algebra and its Kin* (Springer, 2002). Email: <jensh@ruc.dk>.

Authors

Finn Aaserud has the equivalent of a PhD in physics from the University in Oslo and a PhD in the history of science from the Johns Hopkins University in Baltimore. From 1985 to 1989 he was Associate Historian at the Center for History of Physics of the American Institute of Physics, then in New York City, where he conducted an oral history and research project on American physicists’ involvement in science policy after World War II. Since 1989 he has been director of the Niels Bohr Archive in Copenhagen. Aaserud is General Editor of the *Niels Bohr Collected Works* published by Elsevier Physics Publishing. His other publications include: *Redirecting Science: Niels Bohr, Philanthropy and the Rise of Nuclear Physics* (New York and Cambridge, 1991). Email: <aaserud@nbi.dk>.

Svend Bergstein was commissioned as an air force officer in 1971, and graduated at General Staff Course in 1980 at the Royal Danish Defence College (RDDC). Besides service in air defence units and a number of special courses, he has held the following positions: 80-82, Air Staff, Studies and Development. 82-85, RDDC, assistant faculty advisor, International Politics and Strategy. 88-92, The Defence Minister’s Advisory and Analysis Group, studies in technology. 93-94, Minister for Research and Technology. 94-95, RDDC, faculty advisor, International Politics and Strategy. 95-99, defence attaché at the Danish embassies in Stockholm and Helsinki. 99-01, RDDC, head of secretariat for the reorganisation of RDDC. 2001, retired as Lieutenant Colonel. He currently works as a consultant at RDDC. Email: <svend.bergstein@mail.dk>.

Ute Bernhardt studied philosophy, computer science and psychology. She was CEO and member of the board of the German “Computer Professionals for Peace and Social Responsibility”. Her works centres on privacy issues and computers and the military. She works at the Fraunhofer Gesellschaft and is a lecturer for computer science at the University of Applied Science Bonn-Rhein-Sieg. Email: <ute@kriton.bn.shuttle.de>.

Svend Clausen is head of the Operations Research and Mathematical Statistics Department, Danish Defence Research Establishment. Furthermore he is associate professor at the Informatics and Mathematical Modelling Institute, Technical University of Denmark (DTU). He is also part owner of DADCON, Danish Defence Consultants aps. His main interest is the use of mathematics for practical problem solving and he has recently proposed and introduced a new subject *Problemløsning og Modellering* at DTU. He also takes an interest in natural sciences and philosophy in general. He is author of *Kybernetik, systemer og modeller* (IMSOR, DTU 1969) and *Matematisk Modellering* (IMM, DTU 2002). Email: <sc@ddre.dk>.

Philip J. Davis, a native of Massachusetts, Harvard B.S., 1943; Ph.D. 1950, D.S.H.C., Roskilde University, 1997, has been in Applied Mathematics since 1963. He is known for his work in classical, functional, and numerical analysis. But he is also known to a larger audience as a commentator on mathematics particularly in its relation to society. Among his many nontechnical publications is the widely read and prize-winning book with Reuben Hersh, *The Mathematical Experience*. Email: <Philip_Davis@brown.edu>.

Setsuo FUKUTOMI was born 1919 in Sakhalin (called Karafuto when a Japanese territory). Graduated from the Imperial University of Tokyo mathematics (topological geometry). Called up for the Army in 1942 as a Soldier of the Second Class, in which respect he worked with cryptography and decoding and with finding the keys for the military cryptography of the General Staff of the Army. Demobilized with the rank of second lieutenant in 1945. Assistant at the Faculty of Sciences of the University of Tokyo. Co-editor (1947-1954) of the first edition of the *Encyclopedic Dictionary of Mathematics* (published by the Mathematical Society of Japan) together with Professor Shokiti IYANAGA. Worked to found the Mathematical Institute of the Faculty of Sciences and Human Sciences of the University of Nihon (Nihon Daigaku, Bunrigakubu). Then Professor of Mathematics at the Tokyo University for Agriculture and Technology until his retirement. Fax: +81-3-3390 3436.

Revaz Gamkrelidze is Member-Correspondent of the Russian Academy of Sciences and a Member of the Steklov Mathematical Institute, Moscow. His early interests in Mathematics were Algebraic Topology and Algebraic Geometry, where he computed the Chern classes of complex algebraic manifolds. From mid-fifties he was engaged in the Pontryagin group in developing the Optimal Control Theory. He is the co-author, together with L. S. Pontryagin, V. Boltyansky and E. Mishchenko, of the monograph *The Mathematical Theory of Optimal Processes*, Wiley, 1962, and of *Principles of Optimal Control Theory*, Plenum, 1978. Email: <gam@ipsun.ras.ru>.

Wolf Göhring studied Mathematics and Physics at the University of Saarland. There in 1960, he wrote his first computer programme. In the late 60s, early 70s he was concerned with artificial intelligence, man-machine interaction and networking. After a 15 years membership in the works council of the German National Research Institute for Computer Science (GMD) he now is studying the political economy of information and communication technology and its implication for the social development and sustainability. Email: <wolf.goehring@bi.fhg.de>.

Andrew Hodges studied mathematics at Cambridge and London universities (Ph.D. 1975). His research work in mathematical physics has been in association with Sir Roger Penrose (University of Oxford), and has mainly concerned the reformulation of quantum field theory in Penrose's twistor geometry. He is currently a Lecturer in mathematics at Wadham College, Oxford University. He is also the biographer of Alan Turing, having published the large-scale work *Alan Turing: the Enigma* in 1983, and a shorter philosophical text in 1997. Email: <andrew@synth.co.uk>.

Ib Martin Jarvad is Reader in philosophy of law at Roskilde University, Section for Philosophy and Science Studies (Denmark). He has published books and articles on constitutional law, international law, political and legal philosophy. He is now working on the history of natural law theories in law and political philosophy focussing on Hugo Grotius. Email: <jarvad@ruc.dk>.

Tinne Hoff Kjeldsen is Associate Professor of History of Mathematics at the Department of Mathematics and Physics at Roskilde University (Denmark). She studied mathematics at the University of Copenhagen (M.A. 1990) and took a Ph.D. in the history of mathematics from Roskilde University. Her research has mainly dealt with topics from the 20th century, especially within the history of game theory, mathematical programming, and the theory of systems of linear inequalities and the impact of World War II on the development of these fields. She is currently working on the historical development of the theory of convexity with focus on the significance of the different contexts in which this development took place. Email: <thk@ruc.dk>.

Helge Löfstedt is Director of Research at the Swedish Defence Research Establishment. He has conducted various analyses in the military field from a basic training in engineering, operations research and economics. His work has mainly dealt with force structuring and force planning on levels from single weapons system over composite unit structure to joint army, navy and air force structure. During that he has received experiences of military technology and weapons systems evaluation, cost-effectiveness studies and uncertainty analysis to seek balance and flexibility in solutions to meet an uncertain future. He is also experienced in using analyzing tools as manual and computer-assisted war-gaming, simulation and analytical modelling. Since 1997 he is serving as an analyst in the Swedish Ministry of Defence. Email: <helge.lofstedt@foi.se>.

Tetu MAKINO studied mathematical analysis at Kyoto University and Osaka City University, and took a degree of Dr. Sci. from Kyoto University in 1987 on a study of the Euler-Poisson equation which describes the evolution of gaseous stars. After teaching at Osaka Sangyo University, since 1995 he is a Professor of Mathematics at the Faculty of Engineering, Yamaguchi University. He has been studying the mathematical theory of gas dynamics, about which he gave an invited lecture at the Annual Meeting of the Mathematical Society of Japan, March 2001. His recent work is *On the Relativistic Euler Equation*, a joint work with Taiwanese mathematicians. Email: <makino@po.cc.yamaguchi-u.ac.jp>.

Elisabeth Rakus-Andersson is employed as a Docent in mathematics at the Blekinge Institute of Technology in Karlskrona – Sweden. She took her doctor's degree in applied mathematics in Poland in 1991 and the docent competence in Sweden in 2001. Besides the classical mathematical domains she researches in Fuzzy Set Theory and applies it to medicine, numerical methods and statistics, which results in many international publications and invited lectures. Her teaching duties concern the courses in mathematics for Master of Science students. She currently prepares a book about fuzzy mathematics in medicine and numerical methods due to an agreement with Springer-Verlag. Email: <era@bth.se>.

Ingo Ruhmann worked after his diploma in computer and political sciences as an scientific adviser for the German Bundestag and the European Parliament. His areas of interests are computers and the military, IT security. He was a member of the board of the German "Computer Professionals for Peace and Social Responsibility". He is a lecturer for computer science at the University of Applied Science Bonn-Rhein-Sieg. Email: <ingo.ruhmann@acm.org>.

Jesper Ryberg is Associate Professor in philosophy at Roskilde University and presently head of the Board of Studies for Philosophy and Science Studies. His main interests are moral philosophy, political philosophy and philosophy of law. He has written several works on normative ethics and applied ethics and is presently editing a forthcoming book on population ethics. Email: <ryberg@ruc.dk>.

Jürgen Scheffran received a PhD in physics and is Senior Researcher at the Potsdam Institute for Climate Impact Research (PIK) in Germany. His main fields of research are the mathematical modelling of complex systems, technology assessment, and the analysis of conflict and cooperation in energy, environment and international security. He has experience in teaching mathematical modelling and interdisciplinary studies at the universities of Marburg, Darmstadt and Potsdam. He is co-editor of two journals on peace and conflict studies, and published a number of articles and books, most recently on conflicts on biodiversity; energy conflicts; and space use and ethics. Email: <scheffran@pik-potsdam.de>.

Elmar Schmähling had served for more than 30 years in the Federal German Armed Forces before in 1990 he was forced to leave the service after heavily criticizing the nuclear doctrine of NATO security strategy and German armament policy. After a career as naval officer with positions on destroyers he had joined the central branch of the armed forces. There promoted to Rear Admiral he held the position of Chief of Military Counterintelligence Service (MAD) (1982–1983). During his last five service years he served as Chief of the Office for Studies and Exercises, a kind of think tank for the German Minister of Defence. After he had left service he joined the German and international peace movement. He has published three books on *NATO Strategy*, *German Military Politics*, and *The Reform of the Bundeswehr*. Email: <elmar_schmaehling@t-online.de>.

Albert N. Shiryayev, mathematician, pupil of Andrei N. Kolmogorov, Senior Researcher of the Steklov Mathematical Institute of the Russian Academy of Sciences, Corresponding Member of the Russian Academy of Sciences; Professor of the Moscow State University (since 1970) and Head of the Probability Theory Department of that university (since 1996); have been awarded the Markov Prize of the Soviet Academy of Sciences (1974), Kolmogorov Prize of the Russian Academy of Sciences (1994); President of the Bernoulli Society for Probability Theory and Mathematical Statistics (1889–1991), President of the Bachelier Financial Mathematics Society (1998–1999). D.S.H.C. of Albert Ludwigs University of Freiburg im Breisgau, Germany (2000), Professor Honoris Causa of Amsterdam University (2002). Email: <shiryayev@mi.ras.ru>.

Reinhard Siegmund-Schultze studied mathematics in Halle (Germany) and took a Ph.D. from Leipzig in the history of mathematics in 1979. Since 1978 he has been Assistant Professor at Humboldt University Berlin. After an interruption of his career for about 10 years due to the political situation in Germany he became Full Professor for history of mathematics at Agder University College in Kristiansand (Norway) in 2000. He has published articles on the history of mathematical analysis and books on mathematics in Nazi Germany, on emigration, and on the Rockefeller policies with respect to mathematics. He is currently working on applied mathematics in international contexts in the first half of the 20th century. Email: <Reinhard.Siegmund-Schultze@hia.no>.

Kathleen Broome Williams is Associate Professor of History at Bronx Community College, City University of New York, and a member of the history doctoral faculty at the City University of New York Graduate School and University Center. Her main interest is military history, particularly twentieth century naval science and technology. She is the author of *Secret Weapon: High-frequency Direction Finding in the Battle of the Atlantic* (Naval Institute Press, 1996) and *Improbable Warriors: Women Scientists and the U.S. Navy in World War II* (Naval Institute Press, 2001). Email: <kbbwilliam@aol.com>.
